

# Addins

## lab #lab06

**James L. Parry**  
**B.C. Institute of Technology**

---

## Lab Goals

---

The purpose of this lab is to expose you to one way to incorporate an addin for your CodeIgniter webapp.

I originally had more comprehensive plans, incorporating a helper and adding some maintenance pages, but decided that those were not appropriate at this point. The `formfields_helper` that I mentioned in class is in the starter file, in case you wish to explore it on your own.

Suggestion: you may want to skim the slideshow first, before working your way through it.

---

## Lab Submission

---

Your lab is tutorial "ci-normal05", and will be completed in a github repository. This will be your (forked) starter-caboose repo.

Follow gitflow workflow practices (forking & branching).

You may work on your own or use pair programming.

Please make sure that your work is in the "master" branch or your repository, when done, and that any other branch(es) have been merged into it.

Submit a readme to the lab dropbox, with a link to your github repository.

---

## Lab Marking Guideline

---

I have chosen to keep this lab purposefully easy, so as to give you all an opportunity to complete it without impacting your preparations for midterm week.

Marks awarded as follows:

- Incorporating Caboose into the master view template ... 2
- Adding and configuring the rating widget for use with Caboose ... 3
- Applying the rating widget to the two views described ... 2
- Observing proper gitflow workflow (forking, branching, signing, not messing up the database config) ... 3

---

## Congratulations!

---

You have completed lab #lab06: Addins

If you would take a minute to [provide some feedback](#), we would appreciate it!

The next activity in sequence is: There is nothing further in this course

You can use your browser's back button to return to the page you were on before starting this activity, or you can jump directly to the course [homepage](#), [organizer](#), or [reference](#) page.
